# Embed CARTO

In this activity, we will create a new HTML page using Bootstrap, embed a CARTO map we created earlier, and deploy the page to Github Pages.
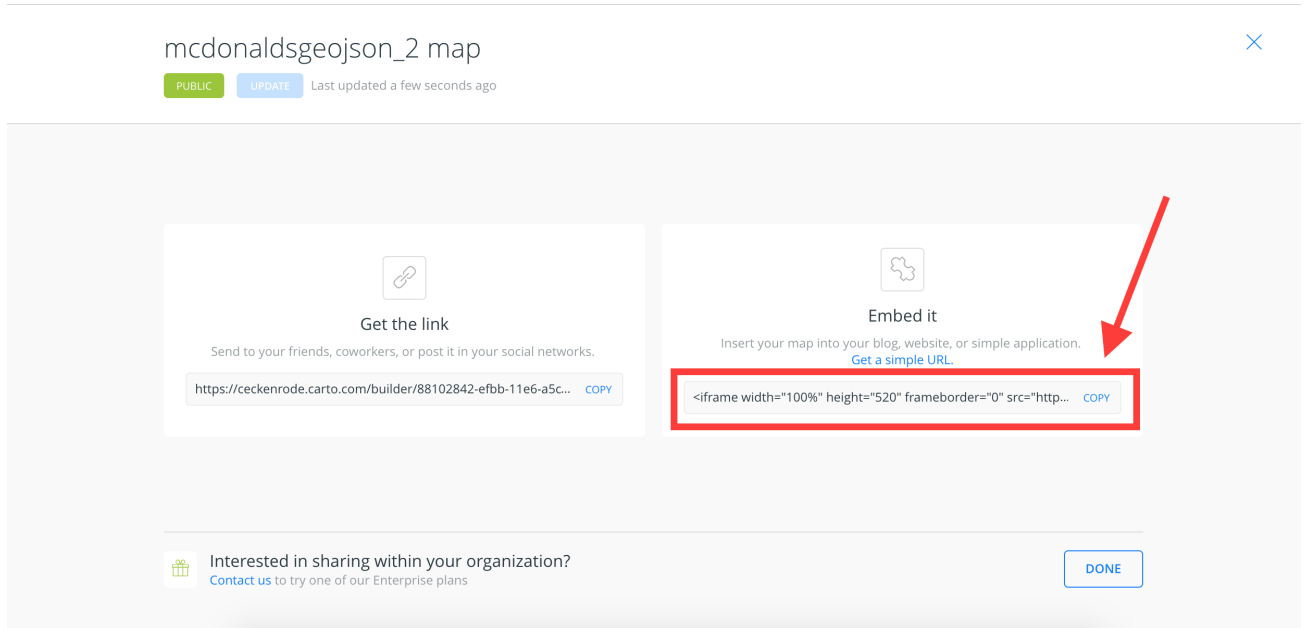

Instructions

- This web page should describe the data being displayed on the map and utilize the Bootstrap grid and components.
- Deploy the web page to Github Pages when complete.
- Below are instructions for publishing a CARTO map:
  1. CARTO maps may be embedded using an iframe element.
  2. To publish your map for embedding, complete the following steps:
     1. Inside the "Layers" view, click the SHARE button at the bottom of the left sidebar.

     2. You should be taken to a page that looks similar to the screenshot below. Click the "PUBLISH" button.

3. Copy the iframe element to insert into your HTML document.

Bonus

- If you finish early, add a Google Font and some of your own custom styling.
